PROFESSIONAL SUMMARY

Backend Engineer working across Java (Spring Boot), Python (Django REST Framework, FastAPI), Go (Gin) and JavaScript (Node.js, Express, React). Builds secure RESTful APIs and microservices with PostgreSQL, Apache Kafka, gRPC and Redis, and has integrated Paystack payments end to end, including webhook-driven payment confirmation with signature verification, deployed on AWS EC2. Recently completed the Software Engineering programme at Semicolon Africa, where I led a team of peers to deliver a working product in a three-week sprint. Bring seven years of prior experience leading technical teams and delivering projects against fixed deadlines, with strong leadership, project management and communication skills. Based in Lagos and available for full-time, onsite work.

PROFESSIONAL SKILLS

Leadership - Team Management - Project Management - Stakeholder Communication - Cross-Functional Collaboration - Training and Mentoring - Problem-Solving - Troubleshooting Under Pressure - Planning and Scheduling - Quality Control - Attention to Detail - Time Management - Adaptability

TECHNICAL SKILLS

Languages: Java, Python, Go, JavaScript, SQL

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Django, Django REST Framework, FastAPI, Gin, Node.js, Express.js, Sequelize, React

Backend: RESTful API design, Microservices, gRPC, WebSockets, JWT authentication, Role-based access control (RBAC), Object-oriented programming (OOP), Design patterns

Databases and Messaging: PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka, Event-driven architecture, Flyway migrations, Relational database design, Transaction management

Payments and Integration: Paystack, Webhooks with signature verification, Third-party API integration

Testing and Tools: JUnit 5, unittest, Jest, Unit testing, Integration testing, Test-driven development (TDD), Postman, Swagger/OpenAPI, Docker, Docker Compose, AWS EC2, Git, GitHub, Maven, uv, Linux, IntelliJ IDEA

PROFESSIONAL EXPERIENCE

Software Engineering Trainee
Semicolon Africa, Lagos **Sep 2025 – 2026**

- Built backend systems in Java (Spring Boot), Python (Django REST Framework), Go (Gin) and JavaScript (Node.js, Express), including REST APIs backed by PostgreSQL and MongoDB.
- Led a team of peers to deliver a visitor management system to MVP within a three-week sprint.
- Integrated Paystack payments into a Spring Boot service, with webhook-driven payment confirmation and signature verification, and deployed it on AWS EC2.
- Took part in peer code reviews and prepared technical presentations for the cohort, including one on Spring Security.

Lead Audio-Visual Systems Engineer
Live Events and Installations, Nigeria **2016 – 2025**

- Led and trained teams of engineers, interns and volunteers delivering live technical systems for audiences of up to 100,000 people.
- Managed projects from planning through installation to client sign-off, coordinating stakeholders and meeting fixed deadlines.

SOFTWARE ENGINEERING PROJECTS

CareRound: Hospital Ward Management System
Java 25, Spring Boot 4, Spring Security, PostgreSQL, Apache Kafka, gRPC, Redis, Docker Compose

- Designed a microservices backend of nine services and have built and tested seven end to end (authentication, users, wards, patients, rounds, care tasks, notifications), each with its own PostgreSQL database.
- Implemented JWT authentication with BCrypt password hashing, role-based access control and break-the-glass emergency access for clinical staff.
- Used Kafka for event-driven communication between services and gRPC for synchronous service-to-service calls.

- Found and fixed a security flaw where account activation tokens travelled inside Kafka event payloads: moved the tokens to Redis with an expiry and served them over gRPC only at send time.

CodexHotel REST API
Java, Spring Boot, MongoDB, Paystack, AWS EC2, Swagger/OpenAPI
- Built a hotel management REST API with full CRUD, role-based access and payment calculation.
- Integrated Paystack payments end to end, so bookings are confirmed only on a verified payment event.
- Deployed the service on AWS EC2 and documented the endpoints with Swagger/OpenAPI.

Expense Tracker API
Java, Spring Boot, Spring Security, PostgreSQL, JWT
- Developed a personal finance REST API with JWT-secured endpoints, expense categories and reporting endpoints for monthly inflow against outflow, fixed against variable costs, and net income.
- Designed an Open Banking (Mono) integration to import bank transactions into the expense records.

ResultPortal: Student Result Management API
Python, Django, Django REST Framework, PostgreSQL
- Developed an academic result management API across five Django apps, with a custom user model, departments, courses, course registration and results.
- Implemented course registration validation (duplicate and semester checks), automatic grade and grade point assignment, and a CGPA endpoint weighted by credit units.

Task Management API
JavaScript, Node.js, Express.js, PostgreSQL, Sequelize, Docker
- Built a task management REST API as a timed engineering case study, using a layered architecture (routes, controller, service, repository) with centralised error handling.
- Implemented CRUD endpoints with status filtering, input validation and correct HTTP status codes, with PostgreSQL running in Docker.

FoodDash: Food Ordering System
Go, Gin, React, WebSockets
- Built a Go (Gin) REST API and React frontend for food ordering, with real-time order tracking over WebSockets.

Additional Projects
Java, Python, Go, JavaScript
- Project Vero (Java, Spring Boot, PostgreSQL, Flyway): identity and wallet platform with JWT authentication, role-based access control and NIN/BVN identity verification.
- Multi-Fuel Dispensary System (Python, unittest): object-oriented Python system built test-first, with file-based persistence.
- DropSend (Go, React): local network file-sharing tool with peer discovery, published as a Docker image on Docker Hub.
- Semicolon Store POS (JavaScript, Jest): retail checkout system with receipt generation and payment logic, covered by a Jest test suite.
- Mini Kindle Reading Tracker (Java, Spring Boot, MongoDB): API covered by more than 30 integration tests.

EDUCATION

Software Engineering Programme, Semicolon Africa, Lagos — 2025 – 2026
Entrepreneurship Programme, Henley Business School — 2026
B.Sc. Political Science, Obafemi Awolowo University — 2011 – 2016
National Youth Service Corps (NYSC), completed — 2017
